

# KYLIN-5356

## BackGround

当前仅支持在后台配置系统管理员，导致管理员拥有所有项目的管理权限，权限过大，不符合场景需求。

**需求：**支持配置 KE 项目管理员

## Dev Design

具体设计如下：新增两个接口

1. 获取项目管理员所属所有项目下的已授权的所有用户接口
2. 获取项目管理员所属所有项目下的已授权的所有用户组接口

本地改动不影响原有逻辑，仅需要 `NAccessControllerV2` 类中新增以上两个接口，接口入参，出参，URI。

```
@ApiOperation(value = "getAllAccessUsers", tags = { "MID" })
@GetMapping(value = "/all/users", produces = { HTTP_VND_APACHE_KYLIN_V2_JSON })
@ResponseBody
@PreAuthorize(Constant.ACCESS_HAS_ROLE_ADMIN)
public EnvelopeResponse<Map<String, Object>> getAllAccessUsers(
    @RequestParam(value = "project", required = false) String project,
    @RequestParam(value = "userName", required = false) String userName,
    @RequestParam(value = "pageOffset", required = false, defaultValue = "0") Integer pageOffset,
    @RequestParam(value = "pageSize", required = false, defaultValue = "10") Integer pageSize)
    throws IOException {
```

```
@ApiOperation(value = "getAllAccessGroups", tags = { "MID" })
@GetMapping(value = "/all/groups", produces = { HTTP_VND_APACHE_KYLIN_V2_JSON })
@ResponseBody
@PreAuthorize(Constant.ACCESS_HAS_ROLE_ADMIN)
public EnvelopeResponse<Map<String, Object>> getAllAccessGroups(
    @RequestParam(value = "project", required = false) String project,
    @RequestParam(value = "groupName", required = false) String groupName,
    @RequestParam(value = "pageOffset", required = false, defaultValue = "0") Integer pageOffset,
    @RequestParam(value = "pageSize", required = false, defaultValue = "10") Integer pageSize)
    throws IOException {
```

## Test Advice

- 注意权限的独立和交叉部分
- 需要多注意测试权限的相关，并且考虑权限边界情况，特殊场景等
- 需要测试更新同步用户的接口
